Portfolio: sharath-fsd.github.io/Portfolio-3-/ | LeetCode: leetcode.com/u/dW5Hu0XQfj/

PROFESSIONAL SUMMARY

Entry-level Java developer experienced in REST APIs, authentication and persistence using Spring Boot, Spring Security, Hibernate/JPA, MySQL and JWT. Delivered a client-facing appointment management application and Java application logic. Strong foundation in OOP, SQL, collections and exception handling; seeking Java backend and junior software engineering roles.

TECHNICAL SKILLS

Java: Core Java, OOP, Collections Framework, Exception Handling, Multithreading basics

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT

Data: MySQL, SQL, relational schema design, CRUD operations, JSON, Android SharedPreferences

Testing and Tools: JUnit 5, Postman, Maven, Git/GitHub, Docker, Android instrumentation tests

Frontend: React.js, JavaScript, Axios, HTML, CSS, Bootstrap, Tailwind CSS

Problem Solving: Data structures and algorithms; 182+ LeetCode problems solved

EXPERIENCE

Independent Client Project - Java Full-Stack Developer | 2026

Beauty Parlour Management System

- Built Spring Boot REST APIs for services, appointments and customer/admin workflows, including booking approval and rejection; implemented JWT authentication and role-based authorization with Spring Security.
- Designed MySQL persistence using Spring Data JPA and Hibernate for relational data models and CRUD operations.
- Integrated React workflows through Axios and implemented user notifications and transactional emails.
- Tested APIs with Postman and JUnit 5, incorporated client feedback and delivered deployment-ready functionality.

PROJECTS

Rise - Fitness & Productivity Tracker | Java, Android SDK, JSON

- Implemented Java application logic for task CRUD, recurring schedules, XP/rank progression, streak resets, reusable plans and timed bonus rewards.
- Built local persistence with SharedPreferences and validated JSON backup/restore; scheduled recurring alarms using Android AlarmManager and BroadcastReceiver.
- Verified scheduling and progression rules with 802 automated Java checks and Android instrumentation tests, covering duplicate-reward prevention and timed-event expiry.

E-Commerce Shopping Application | Java, Spring Boot, React, MySQL

- Developed REST APIs with JWT authentication and authorization; implemented CRUD workflows using Hibernate/JPA and MySQL for secure frontend-backend communication.

github.com/sharath-fsd/e-commerce-website-project-with-Backend

Car Rental Management System | Java, Spring Boot, MySQL

- Built REST APIs for vehicle booking and rental management with authentication, authorization, relational data models and CRUD operations using Hibernate/JPA.
